PROJECTS

•Structure-Aware AI for Code Summarization

Python, PyTorch, Transformers, AST

Feb 2026

- Architected and trained a custom Seq2Seq Transformer model (6 Layers, 8 Attention Heads) from scratch to translate complex Python logic into highly accurate human-readable English summaries.
- Engineered a Hybrid Input Pipeline by fusing raw source code with Abstract Syntax Trees (AST) and a custom BPE Tokenizer, effectively capturing deep structural nesting and scoping rules.
- Mitigated semantic hallucinations and resolved ‘Catastrophic Forgetting’ in low-density code by implementing Value-Aware Training and Encoder-Freezing techniques.

•Placement Management System

PHP, MySQL, HTML, CSS, JavaScript

Jan 2026 – Present

- Developing a full-stack placement management portal for NIT Warangal to streamline student registrations, company job postings, and interview scheduling on a unified platform.
- Designed a normalized relational database schema in MySQL to efficiently manage student profiles, company records, application statuses, and placement results.
- Implementing role-based access control for three user types – students, placement coordinators, and company recruiters – each with tailored dashboards and permissions.
- Building automated notification and shortlisting workflows to reduce manual coordination overhead and keep students updated on application progress in real time.
